Stat Sniper Launches Free App Bringing Predictive AI & Social Tools to Sports Betting

One platform to track your props, uncover trends, buy picks, sell picks, chat with other bettors, and refine your edge. Now live on iOS, Android, web, and macOS. Built by bettors, for bettors.

NEWPORT BEACH, CA — Stat Sniper Inc. today announced the public launch of Stat Sniper, a free predictive AI platform for the nearly 54 million Americans who bet on sports each year. Available now on iOS, Android, the web at statsniper.com, and as a native macOS desktop app, Stat Sniper is built for bettors who are tired of stitching together five different tools just to track a card, and ready for one platform that actually thinks alongside them.

The app combines prop tracking, predictive performance analytics, an AI betting expert, a picks marketplace, and a live social feed in a single free product. No subscription required to get started. No bet placement required to use it.

"I built Stat Sniper because I was tired of being the bettor with twelve tabs open. Spreadsheets, sportsbooks, Twitter, Discord, and still no straight answer to the only question that matters: how can I win?" - Mason Berkshire, CEO, Stat Sniper Inc.

One Account, Every Screen

Stat Sniper now runs natively wherever bettors actually live. The iOS and Android apps handle live cards on the move. The web version at statsniper.com is built for deeper sessions, breaking down matchups, slicing analytics, and managing a marketplace presence from any browser. The new macOS desktop app brings a focused, always-available workspace to power users who want Chad, the feed, and live game data sitting one keystroke away. Accounts, cards, and chat history sync across all four platforms in real time.

Meet Chad: The AI That Doesn't Hedge

At the center of the Stat Sniper experience is Chad, an AI sports betting expert available 24/7 across every platform. Chad is powered by predictive modeling and live data, and built to give direct answers. Sharp analysis on matchups, props, and lines with no filler and no hedging. Users can ask Chad to break down stats and betting terminology, compare players using matchup history and contextual data, or just get a fast read on where the value is. Chad also auto-generates a Quick Take on every matchup, surfacing edges and high-confidence angles the moment a user opens a game on mobile, web, or desktop.

Prop Tracking Built for the Way Bettors Actually Think

Stat Sniper covers props across the NBA, NFL, MLB, UFC, EPL, NCAA, NCAAB, and MLS. Users browse available lines, build a custom card, and track results in real time. No account funding, no bet placement required. As results roll in, the platform surfaces performance trends

and pattern insights that compound over time. The result is a living record of what's working, what isn't, and where a bettor's real edge lies, accessible from any device.

Analytics That Go Beyond the Box Score

The platform's analytics suite applies predictive models to surface trends, identify edges, and put raw stats in context. Users can slice their prop history by sport, prop type, and stake size to see exactly where they're winning, and where they're bleeding. A Performance By Sport breakdown tracks win rates across all supported leagues. Bankroll visualization tools show the full picture of what's driving results, making Stat Sniper as valuable for long-term strategy as it is for tonight's card. The web and macOS apps expand these views with larger dashboards built for deeper analysis sessions.

The Social Layer Sharp Bettors Have Been Missing

Stat Sniper is a social platform as much as it is an analytics tool. A personalized Feed surfaces picks, tips, and updates from bettors a user follows. Official live chats run for every game and event, with private groups and direct messages available for closer-knit conversations. A built-in Schedule keeps users ahead of upcoming matchups, and the Stats Hub provides real-time data to back every take.

For bettors who have built an audience, the Influencer Hub turns expertise into income. Users can share and sell premium picks directly inside the app, grow their following, and track reach and engagement through a dedicated Insight Dashboard. The web and macOS apps give creators a full-screen workspace for building content, managing subscribers, and publishing picks. Stat Sniper provides the infrastructure. Bettors bring the edge.

Available Now, Free on Every Platform

Stat Sniper is free to download, with full access to prop tracking, predictive analytics, Chad AI, and all community features from day one. The app is available now on the App Store, Google Play, the web at statsniper.com, and as a native macOS download. For more information, visit statsniper.com.
